Judge us by the company we keep  
and the contracts we complete

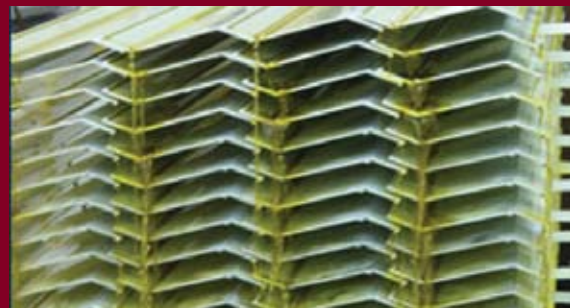

Quality is the foundation that our business and reputation are built upon.

AAC in the West Midlands has a total and sympathetic understanding of the architectural and allied industries. With our past achievements, present abilities and focus on the future, we are dedicated to delivering an unrivalled service.

AAC can receive materials by collection or delivery, whereupon it is sorted and processed by our trained and skilled operatives. To ensure safe receipt and to monitor that there is no evidence of damage or fault within the metal; materials are assessed and inspected prior to processing.

It is important to remember that no matter what the quality of powder or application, this is only as good as the chemical pre-treatment underneath it. Pre-treatment is a critical step in the powder coating process and our state of the art pre-treatment facility, together with our affiliation with recognised chemical suppliers gives confidence in the pre-treatment applied.

The architectural powder coating is applied by skilled technicians using state of the art, automatic and manual electrostatic spray equipment. This gives a consistent, reproducible, high quality, durable finish, with a minimum coating thickness of 40 microns or the minimum specification of the architect or powder manufacturer.

We pride ourselves on the ability to generate a consistently reproducible quality finish and this is supported by our Syntha Pulvin Approved Applicator Status. We coat in accordance with BS6496 / BS 12206 specifications and this enables us to produce a quality product perfectly designed for architectural purposes.

Packaging for the protection of the finished goods is an integral part of our service and we pride ourselves on the quality of our packaging. We are constantly reviewing both our processing and packaging policies for the benefit of the environment and to reduce our carbon footprint.

It is our objective to become a recognised force within the industry and an organisation on which you can associate both quality and service as standard practice.

Powder coating is the high quality, cost effective solution for all of your decorative and functional finishing needs, such as:

- Extrusions & Sheet
- Aluminium fabrication used in: Balustrades, Curtain Wall, Doors, Entrances, Fencing, Fenestration, Fixtures & Fittings
- Interior and Exterior Partitions
- Louvres, Railings, Roofs, Skylights
- Street Furniture
- Wall and Ceiling Panels, Windows
